EDUCATION

University of Maryland, College Park

BS in Computer Science and Minor in Mathematics (Aug 2023 – Dec 2026)

Virginia Tech

MEng in Computer Science and Applications (Sep 2026 – Jul 2027)

EXPERIENCE

Amazon

Arlington, VA

Software Development Engineer Intern

June 2026 - Sep 2026

Knack Works by Jacobs

Chantilly, VA

Software Engineer Intern

May 2025 - Aug 2025

- Enabled scalable and secure dependency ingestion for a private software registry by building a **Rust** application that uses Tokio for asynchronous I/O.
- Simplified management of large applications by creating **Helm** charts written using Golang templating.
- Increased visibility for internal services by containerizing and deploying an application dashboard using **Podman** and **Kubernetes**.

Robotics Algorithms & Autonomous Systems (RAAS) Lab at UMD

College Park, MD

Machine Learning Undergrad Research Assistant

Nov 2024 – May 2025

- Enabled autonomous 3D scene exploration by implementing an optimizer for camera view selection in **PyTorch**.
- Cut down data collection time from weeks to hours by writing a **Python** script to collect images in photo-realistic virtual environments.
- Streamlined model training by creating TensorBoards to visualize loss and reconstruction quality.

Visalaw.ai

Remote

Data Intern

Jun 2024 – Aug 2024

- Decreased data entry time by 99% by using **Selenium** to automate the document collection process.
- Curated corpus for LLM training by using **Pandas** for data cleaning.
- Streamlined the process of exporting newly created datasets through scripting in **Python**.

LEADERSHIP

App Dev Club at UMD – Machine Learning Tech Lead

Led 13-person team in collaboration with The MITRE Corporation to develop a malware analysis platform

- Architected a private and offline malware analysis AI assistant by using **Ollama** to run a **Llama 3** LLM and **LangChain** for Retrieval-Augmented Generation (RAG).
- Improved AI pipeline reliability by creating data flow in **Apache NiFi** to store generated security reports in an **Elasticsearch** database.
- Reduced chatbot response latency by 40% after rewriting the app's backend in **FastAPI**

PROJECTS

Hover Sight – Full stack app to detect human poses in a drone feed

- 2nd place in the hardware category for Bitcamp, a collegiate hackathon with over 500 participants.

SKILLS

Languages: Python, JavaScript, SQL, C, C++, Java

Frameworks & Libraries: Flask, FastAPI, React, LangChain, PyTorch, TensorFlow

Infrastructure & Tools: Docker, Kubernetes, Helm, GitLab CI/CD, AWS, Linux, Elasticsearch, MongoDB, Apache NiFi
