EDUCATION

Virginia Tech – Master of Engineering in Computer Science (Aug 2026 – Jun 2027)

University of Maryland – Bachelor of Science in Computer Science and Minor in Mathematics (Aug 2023 – May 2026)

EXPERIENCE

Amazon

Arlington, VA

Software Development Engineer Intern

June 2026 - Aug 2026

- Improved data vulnerability mitigation for 10,000+ internal applications by migrating an internal inventory tool to a multi-agent platform built with Amazon Bedrock AgentCore and OpenSearch.
- Scaled daily data sensitivity classification workloads to thousands of requests through a serverless event-driven pipeline with AWS Lambda, SQS, and SNS.
- Cut average first-token latency for an inventory chatbot by 85% from 20s to 3s by replacing an AWS WebSocket API with an AgentCore gateway using HTTP SSE.
- Increased user satisfaction scores by 49% by building real-time thinking-step visibility and proactive context collection into a React chatbot UI.

Knack Works by Jacobs

Chantilly, VA

Software Engineer Intern

May 2025 - Aug 2025

- Made bulk software package downloads 10x faster by building a Rust command line tool that batches package requests and processes them concurrently.
- Increased visibility into internal application performance by containerizing and deploying a monitoring dashboard with Podman and Kubernetes.
- Standardized deployment and configuration of internal services by creating reusable Helm charts.

Robotics Algorithms & Autonomous Systems (RAAS) Lab at UMD

College Park, MD

Machine Learning Undergrad Research Assistant

Nov 2024 – May 2025

- Enabled autonomous 3D scene exploration for an AI agent by implementing a next-best-view selection algorithm in PyTorch.
- Streamlined dataset curation for image-based modeling algorithms by creating Python scripts to compile images from photorealistic virtual environments.
- Improved observability of neural rendering model training by building TensorFlow dashboards to track model performance.

LEADERSHIP

App Dev Club, UMD – Machine Learning Tech Lead

Engineering Lead, MITRE malware-analysis project

- Led development of an AI assistant using Ollama, Llama 3, and LangChain for multi-turn malware analysis.

PROJECTS

Hover Sight – Runner-up, Hardware Track, Bitcamp Hackathon (500+ participants)

- Built an autonomous drone system using OpenCV and YOLO for pose detection and path planning.
- Developed a React/TypeScript control interface with a Flask backend and WebSockets for real-time drone telemetry and flight control.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, C++, Rust

Frameworks & Libraries: Flask, FastAPI, React, LangChain, PyTorch, TensorFlow

Infrastructure & Tools: Docker, Kubernetes, Helm, AWS, GitLab CI/CD, Linux, Elasticsearch, OpenSearch
