EDUCATION

University of Maryland – College Park

BS in Computer Science and Minor in Mathematics - Graduating by May 2026 | GPA: 3.75

Leadership: Machine Learning Tech Lead for App Dev Club UMD | Awards: Recipient of President's Scholarship

EXPERIENCE

Software Engineer Intern – Knack Works by Jacobs

May 2025 - Aug 2025 | Chantilly VA

- Enabled scalable and secure dependency ingestion for a private software registry by building a **Rust** application that uses Tokio for asynchronous I/O.
- Reduced deployment time from hours to minutes for **Rust** applications by building a **Gitlab CI/CD pipeline**.
- Simplified management of large applications by creating **Helm** charts written using **Golang** templating.
- Increased visibility for internal services by containerizing and deploying an application dashboard using **Podman** and **Kubernetes**.

Machine Learning Tech Lead – App Dev Club UMD (MITRE)

Jan 2025 - May 2025 | College Park MD

- Architected a private and offline malware analysis AI assistant by using **Ollama** to run a **Llama 3** LLM and **LangChain** for Retrieval-Augmented Generation (RAG).
- Improved AI pipeline reliability by creating data flow in **Apache NiFi** to store generated security reports in an **Elasticsearch** database.
- Increased chatbot response time by 40% by restructuring **FastAPI** endpoints.

Machine Learning Undergrad Research Assistant - Robotics Algorithms & Autonomous Systems (RAAS) Lab UMD

Nov 2024 – May 2025 | College Park MD

- Enabled autonomous 3D scene exploration by implementing an optimizer for camera view selection in **PyTorch**.
- Cut down data collection time from weeks to hours by writing a **Python** script to collect images in photo-realistic virtual environments.
- Streamlined model training by creating TensorBoards to visualize loss and reconstruction quality.

Data Intern - Visalaw.ai

Jun 2024 – Aug 2024 | Remote

- Decreased data entry time by 99% by using **Selenium** to automate the document collection process.
- Curated corpus for LLM training by using **Pandas** for data cleaning.
- Streamlined the process of exporting newly created datasets through scripting in **Python**.

PROJECTS

Tailored Talk – AI curated language lessons

- Achieved personalized learning content using **Gemini** API for app built using **Flask** and **Expo (React Native)**.

Mogulator – Full stack app to detect human poses in a drone feed

- Selected as the runner up in the hardware category for Bitcamp, the largest collegiate hackathon on the east coast with over 500 participants.

SKILLS

Languages: Python, JavaScript, Go, Rust, Java, C, C++, HTML, CSS

Frameworks & Libraries: React, FastAPI, LangChain, PyTorch, Pandas, scikit-learn

Infrastructure & Tools: Docker, Kubernetes, Helm, GitLab CI/CD, AWS, Linux, Elasticsearch, MongoDB, Apache NiFi
